

## Benefits

- Accommodate different physician data entry styles including templates, voice recognition, handwriting and free text
- Easy to learn with a simple unique note-centric design
- Save time for physicians (legible, organized, complete, no more searching for test results or recent orders)
- Provide a higher quality of care for patients with built-in alerts and easy access to information
- Practice Partner Research Network, the first U.S. practice-based research network formed in partnership with Medical University of South Carolina, provides quarterly reports measuring more than 80 clinical parameters

**“Since implementing Practice Partner, we have enjoyed significant cost savings and revenue enhancement while also improving quality.”**

— *Tim Young, M.D., President,  
OMNI Medical Group*

## Practice Partner® Patient Records

### The Power to Improve Productivity and Enhance Quality

Practice Partner® Patient Records is an award-winning electronic medical record (EMR) designed to help you do more for your patients with less effort. Proven to work for thousands of practices nationwide, Practice Partner Patient Records has helped practices of all sizes improve bottom line productivity and quality of care.

### Improve Productivity

- **Easy to complete progress notes.** Unlike other EMRs, Practice Partner Patient Records features a unique note-centric design that allows physicians to complete the entire chart from the progress note. Any information you add to the note — such as medications, vital sign results or lab results — automatically update the entire chart — all from the note.
- **Works the way you do.** Documentation tools adapt to the providers' style and offer a choice of data entry methods including: templates, speech recognition, transcription, digital pen, dictation, and Web-based patient data entry.
- **Delivers quick access to patient information.** A provider dashboard lets you view all critical information — including messages, incoming results, and a daily patient schedule — in one place. In addition, a review bin provides at-a-glance viewing of notes, documents and lab results.
- **Efficiently manages orders.** Physicians are able to quickly see overdue orders and track each order by patient, status, and expected time for a result to return. In addition, incoming results automatically update order status.

### Enhance Quality

- **Supports care plan with built-in evidence based content.** Practice Partner Patient Records offers easy access to the information you need to ensure exceptional care. An extensive knowledge base includes: Web-based access to hundreds of disease and medication protocols; a broad range of progress note templates covering both primary care and specialty topics, which include guidelines for diagnosis and treatment and care reminders.
- **Enhances preventative care.** Health maintenance protocols based on age, sex, disease, medications or other conditions specific to the patient. Includes disease and medication protocols. All are user configurable.

- **Builds in extra safety for medication management.** Electronic prescribing (via SureScripts and RxHub) improves patient safety and speeds new Rx and refill workflow. Physicians and other providers use a comprehensive database of drug costs and checks — drug interaction, drug/allergy, drug/disease, drug/diagnosis — in addition to proactive dose advice.
- **Offers quick data inquiries and reporting.** Streamlines reporting for population data management, pay for performance reporting, quality of care analysis, practice analysis, audits, and clinical studies. It easily handles standard queries (e.g. all diabetics who have had an HgbA1C greater than 7.5 in the last six months) as well as complex requests with up to 14 variables.

## All the Features You Need and More

### Delivers Tools to Help You Manage Your Day

- Analyze the note with a sophisticated coding advisor for Evaluation and Management codes using both the 1995 and 1997 CMS Documentation Guidelines to optimize coding based on documentation. Support consultations and time-based CPT coding.
- Load transcribed text and populate the entire patient chart including the problem list, medication list, medical histories and vital signs. Partially dictate a visit and have the transcribed text automatically go to the correct place in the note.
- Import and export chart summary data using CCD or CCR formats. Communicate with other practice's EMRs or with the patient's PHR (personal health record).
- When importing the data, choose which chart sections to update while still keeping an entire copy of the imported document.

- Customize chart viewing by physician allows provider (and specialty) specific views for charts, chart summaries, and flow charts.

## Delivers Tools to Help Improve Quality

- Rapidly prescribe medications using the thousands of included Rx templates, and easily add your own. Patient Records keeps current, historical and ineffective lists – as well as complete prescription histories.
- Renew current patient medications with a few clicks. Send prescriptions electronically to pharmacies. Electronically receive and reply to pharmacy refill requests.
- Progress note templates include hundreds of care plans, guidelines and patient education handouts. Knowledge base links to clinical guidelines from National Guidelines Clearinghouse, USPSTF and more.
- Capacities to create, annotate, acquire and store images. Draw upon and annotate an image from a library of image templates.
- Patient Records includes major problem, episodic problem, diagnosis and risk lists – all linked to encounters. You can record active status, life cycle and responsible provider. ICD9, ICHIPC and SNOMED coding is available.
